PROFESSIONAL GOALS

1. Research: Continue to conduct, publish and disseminate scholarly public health research that addresses issues of health disparities and environmental justice in minority populations and children with an increasing focus on using big data in epidemiological research.
2. Research Translation: Translate and disseminate research findings into information that can be understood by the lay public and applied by policy makers to reduce environmental exposures and decrease health disparities in minority populations with an increasing focus on outcomes measures.
3. Innovation in Training and Education: Develop best practices to train the next generation of global health and community-based scientists and physicians, especially those of minority backgrounds.
4. International Research Cooperation: Collaborate with colleagues in other nations to develop, implement and sustain environmental health research projects to improve the health of disadvantaged populations abroad and to disseminate state-of-the-art knowledge on disease prevention and environmental health in those countries and in the United States.
5. Global Health Capacity Building: Expand on existing collaborations and build new training sites in foreign institutions where faculty and students from the United States can work to develop research skills and international research collaborations that become sustainable.
